

2021

## Increased Infiltration – DIRT Strategies

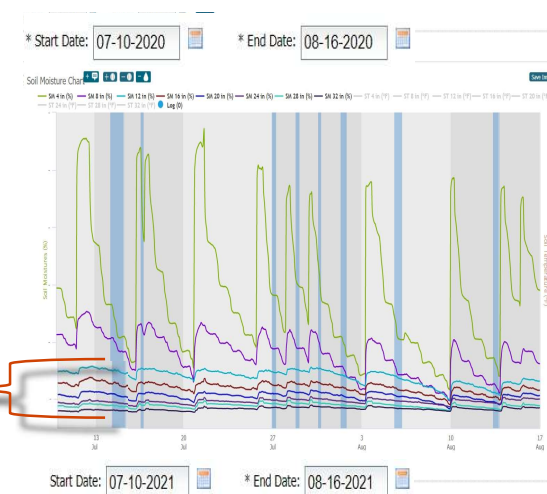

1 T/ac Increased Yield

48% Reduced Water Use

Evergreen Farm  
Brooks, OR  
Blackberries  
Irrigation Infiltration  
2020 vs 2021  
Non-treated vs RF Treated

In 2020, in this tight Silt Loam soil, Non-treated water sits on the surface and does not infiltrate below the upper 10" of the soil

During the same period, in 2021, notice the movement throughout the soil profile to 32" with RF Treated water
